NP01	TB0004-2015	Élan Technologies	
From:	Robert Lindsey – Project Engineer, NP01		
Subject:	Dry Break Fueling Option	Date:	17 December 2015

Attention all Élan NP01 customers:

The NP01 Dry Break Fueling Option uses dual dry-break filler plates. These are designed to be used together with a pair of fuel cans. One can should be filled with fuel while the other is used for a vent and catch can.

Please note that using a single can will result in venting through the same opening and a very slow fill.
