

Technical Bulletin

NP01	TB0015-2016	Élan Motorsports Technologies	
From:	Robert Lindsey – Project Engineer, NP01		
Subject:	Billet Upright Available	Date:	10 August 2016

Attention all Élan NP01 customers:

At the request of customers we have developed a billet version of the upright. This version is designed to be more robust to withstand more abuse than the standard version.

The main advantage over the standard component is a 40% increase in yield strength. This is at the expense of ~1.5 lb per corner weight increase.

These uprights **WILL BE LEGAL** for spec series competition.

This component is directly interchangeable with the standard unit. Hub bearing, lower ball joint stud, and camber blocks all remain the same.

The new component part number is NP01-10-057 and will be sold for an approximate retail price of \$585.00. Delivery dates will be based on quantity of orders. Orders may be placed through Carl Haas Auto (Bo White – haasautorw@aol.com).

Please direct questions Brandon White – Project Coordinator, Elan Motorsports - bwhite@elangroup.com
Parts orders should be placed with Bo White – NP Sales Rep, Carl Haas Auto – haasautorw@aol.com
