

Technical Bulletin

DP08	TB0020-2013	Élan Technologies	
From:	Rob Lindsey		
Subject:	JL-200 Reverse Cable "Tab" Installation	Date:	December 19, 2013

Attention all Elan DP08 teams

Installation of the JL-200 gearbox will demand the fitment of a driver accessible mounting point for the Reverse Lock Out Cable.

Evolution of the F2000 platform as well as team and driver preference means that no one solution will be universally accepted.

All JL-200 conversion kits will include (1) generic tab [DP08-15-025] as a possible solution, to be fitted by teams as they desire.

New cars from Elan will have these tabs welded to the frame location pictured below (unpainted prototype retro fit depicted).
