<b>Subject:</b>	<i>Fuel Line Check Valve</i>	<b>Date:</b>	July 25th, 2008

---

Attention all Zetec powered F2000 teams:

The installation of a check valve in the fuel line from the fuel pump to the fuel rail will significantly improve engine starting. Currently the fuel line drains backward through the fuel pump and causes a loss of pressure. The mandated ECU does not compensate for this low fuel pressure and therefore the engine tries to start with a lean condition until the fuel pressure recovers.

Elan offers a Dash 6 check valve to solve this problem (PF-0076).

Parts prices and delivery information is available upon request from Elan Motorsports Technologies and its distributors.
