

Homologated Optional Components

1. **Updated OEM Components** – Components released by Elan Motorsports Technologies to replace or reinforce OEM components. The goal of these items is to improve reliability, safety, and cost. These items will be released to the customer through the technical bulletin process.
2. **Front Louvre Panels (DP02-40-011 & DP02-40-012)** – These panels improve front downforce, but add drag to the car. The panels may only be run in the stock condition and location, as a replacement for the flat panels (DP02-40-013 & DP02-40-014).
3. **Rear Louvre Panels (DP02-40-017 & DP02-40-018)** - These panels improve rear downforce, but add drag to the car. The panels may only be run in the stock condition and location, as a replacement for the flat panels (DP02-40-019 & DP02-40-020).
4. **Front Dive Planes (DP02-40-045 & DP02-40-046)** - These components improve front downforce, but add drag to the car. The dive planes may only be run in the stock condition and location specified in the technical bulletin.
5. **Performance Friction Brake Rotors (PJ-0120 & PJ-0121)** – Teams may run the PFC brake rotor as a replacement for the OEM Alcon brake rotors. No modification to the rotors, as they are supplied, is allowed.
6. **Gear Position Sensor (DP02-70-013)** – The optional gear position sensor provides the ECU and the dashboard with the correct gear position.
